SUMMARY OF OUR INDUSTRY

National Institute of Solar Energy has assessed the Country’s solar potential of about 748 GW assuming 3% of the waste land area to be covered by Solar PV modules. Solar energy has taken a central place in India’s National Action Plan on Climate Change with National Solar Mission as one of the key Missions. National Solar Mission (NSM) was launched on 11th January, 2010. NSM is a major initiative of the Government of India with active participation from States to promote ecological sustainable growth while addressing India’s energy security challenges. It will also constitute a major contribution by India to the global effort to meet the challenges of climate change.

The Mission’s objective is to establish India as a global leader in solar energy by creating the policy conditions for solar technology diffusion across the country as quickly as possible. The Mission targets installing 100 GW grid-connected solar power plants by the year 2022. This is line with India’s Intended Nationally Determined Contributions (INDCs) target to achieve about 40 percent cumulative electric power installed capacity from non-fossil fuel-based energy resources and to reduce the emission intensity of its GDP by 33 to 35 percent from 2005 level by 2030.

Recently, India stands 4th in solar PV deployment across the globe as on end of 2021. Solar power installed capacity has reached around 61.97 GW as on 30th November, 2022. Presently, solar tariff in India is very competitive and has achieved grid parity.

In order to achieve the above target, Government of India have launched various schemes to encourage generation of solar power in the country like Solar Park Scheme, VGF Schemes, CPSU Scheme, Defence Scheme, Canal bank & Canal top Scheme, Bundling Scheme, Grid Connected Solar Rooftop Scheme etc.

India’s energy demand is expected to increase more than that of any other country in the coming decades due to its sheer size and enormous potential for growth and development. Therefore, it is imperative that most of this new energy demand is met by low-carbon, renewable sources. India’s announcement to achieve net zero carbon emissions by 2070 and to meet 50% of its electricity

needs from renewable sources by 2030 marks a historic point in the global effort to combat climate change.

The Indian renewable energy sector is the fourth most attractive renewable energy market in the world. India was ranked fourth in wind power, fifth in solar power and fourth in renewable power installed capacity, as of 2020. Installed renewable power generation capacity has gained pace over the past few years, posting a CAGR of 15.92% between FY16-22. India is the market with the fastest growth in renewable electricity, and by 2026, new capacity additions are expected to double.

With the increased support of the Government and improved economics, the sector has become attractive from an investors perspective. As India looks to meet its energy demand on its own, which is expected to reach 15,820 TWh by 2040, renewable energy is set to play an important role.

SECTION III- RISK FACTORS

An investment in the Equity Shares involves a high degree of risk. You should carefully consider all the information in this Prospectus, including the risks and uncertainties summarized below, before making an investment in our Equity Shares. The risks described below are relevant to the industries our Company is engaged in, our Company and our Equity Shares. To obtain a complete understanding of our Company, you should read this section in conjunction with the chapters titled “Our Business” and “Management’s Discussion and Analysis of Financial Condition and Results of Operations” beginning on page numbers 93 and 263, respectively, of this Prospectus as well as the other financial and statistical information contained in this Prospectus. Prior to making an investment decision, prospective investors should carefully consider all of the information contained in the section titled “Financial Information as Restated” beginning on page number 171 of this Prospectus.

If any one or more of the following risks as well as other risks and uncertainties discussed in the Prospectus happen to occur, our business, financial condition and results of our operation could suffer material adverse effects and could cause the trading price of our Equity Shares and the value of investment in the Equity Shares to materially decline which could result in the loss of all or part of investment. Prospective investors should pay particular attention to the fact that our Company is incorporated under the laws of India and is therefore subject to a legal and regulatory environment that may differ in certain respects from that of other countries.

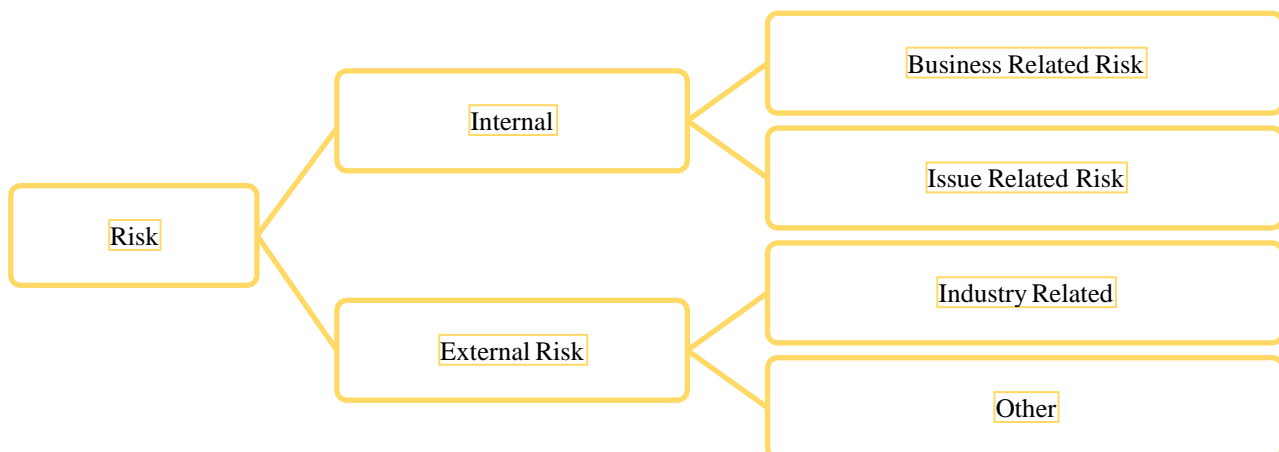

This Prospectus also contains forward looking statements that involve risks and uncertainties. Our actual results could differ materially from those anticipated in these forward-looking statements as a result of many factors, including the considerations described below and elsewhere in the Prospectus. These risks are not the only ones that our Company face. Our business operations could also be affected by additional factors that are not presently known to us or that we currently consider to be immaterial to our operations. Unless specified or quantified in the relevant risk factors below, we are not in a position to quantify financial or other implication of any risks mentioned herein.

Materiality

The Risk factors have been determined on the basis of their materiality. The following factors have been considered for determining the materiality.

1. Some events may not be material individually but may be material when considered collectively.
2. Some events may have an impact which is qualitative though not quantitative.
3. Some events may not be material at present but may have a material impact in the future.

Classification of Risk Factors

Unless specified or quantified in the relevant risk factors below, we are not in a position to quantify the financial or other implications of any of the risks described in this section. Unless the context requires otherwise, the financial information of our Company has been derived from the Restated Financial Information.

The risk factors are classified as under for the sake of better clarity and increased understanding.

1. *Our Company has given Corporate Guarantees of ₹ 7,437.00 Lakh in respect to the loan taken by its subsidiaries and associate companies. We cannot assure that there will be no default done by our subsidiaries in the future.*

Our company has extended Corporate Guarantees to support the borrowing activities of its subsidiaries and associate companies. These guarantees serve as a commitment from the solar company to fulfill the financial obligations of its subsidiaries and associates in the event they are unable to meet their loan repayments. By providing these guarantees, our company assumes the responsibility for repaying the loans on behalf of its subsidiaries and associates, thereby mitigating the risk for the lending institutions. The reasons for providing such guarantees can vary. It could be driven by the need to strengthen the financial position of the subsidiaries and associates, facilitate their access to financing at favourable terms. Providing guarantees is a common practice in corporate structures where the parent company supports the financial needs of its subsidiaries and associates.

Our Company, as per the restated standalone audited financial statements as on March 31, 2023, has given a total sum of ₹ 7,437.00 Lakh as a corporate guarantee in respect to the loan taken by its subsidiaries and associate companies from the banks. The corporate guarantee given for the subsidiaries is Rs. 5,997 Lakh and for associate companies the amount for corporate guarantee is Rs. 1,440 Lakh.

We cannot assure you that there will be any default in the re-payment by our subsidiaries in the future. If any default commits by our subsidiaries, it may affect our business. This would mean that we would have to pay off the loan on behalf of our subsidiaries or associates, which would impact our cash flows and financial position. Additionally, this could lead to a deterioration in our relationship with the banks extending the loan to our subsidiaries, making it harder for us to secure loans in the future. Beyond the financial implications, a default by our subsidiaries/associates could also dent our reputation and credibility in the market. Lenders and other stakeholders may question our ability to manage our affairs, which could result in a loss of confidence and a decline in the value of our securities. This could, in turn, impact our ability to raise capital and grow our business in the long run. There have been no instances of crystallization of guarantees in the past. This indicates that our company's subsidiaries and associates have been able to meet their loan obligations without triggering the need for the corporate guarantees to be invoked. While the absence of past crystallizations is positive, it is important to consider that the risk of crystallization remains present in the future. Unforeseen events or financial difficulties faced by the subsidiaries and associates could potentially lead to the invocation of the guarantees. In such a scenario, our company would be required to honour the guarantee and make the repayments on behalf of its subsidiaries and associates.

2. *We may be unable to accurately estimate costs under fixed-price EPC contracts, fail to maintain the quality and performance guarantees under our EPC contracts, we may experience delays in completing the construction of solar power projects, which may increase our construction costs and working capital requirements and thus may have a material adverse effect on our financial condition, cash flow and results of operations.*

We enter into fixed-price EPC contracts with most of our customers. We estimate essential costs, such as the cost of construction materials and direct project costs, at the time we enter into an EPC contract for a particular project and these are reflected in the overall fixed-price that we charge our customers for the solar power project. However, these cost estimates are preliminary and at the time we submit bids for a project or enter into EPC contracts, we may not have finalized these costs in our related contracts with subcontractors, suppliers and other parties involved in the solar power project.

Our EPC contracts may include provisions allowing for changes by our customers to the scope of work. Such provisions generally allow us to reprice the EPC contract and charge our customer for any additional work. Other than through such changes, we generally cannot reprice or renegotiate an EPC contract once it has been entered into with our customer. As a result, any failure to accurately estimate costs could result in our actual costs exceeding our estimated costs, thereby causing an increase in our construction costs and working capital requirements and as a result, we may incur losses.

3. *We operate in a competitive industry and as such we may not be successful in bidding for and winning bids for solar power projects to grow our business globally, which may have a material adverse effect our business, financial condition, results of operations and prospects.*

Our business depends on our ability to continually win bids for solar power projects and our current business strategy focuses on increasing the number of solar power projects to which we provide EPC services and expanding our operations into new geographies. We bid for solar power projects and compete with other EPC solutions providers based on, among other things, pricing, technical and design and engineering expertise, financing capabilities, past experience, amount and type of guarantees given and track-record. The bidding and selection process is also affected by a number of factors, including factors which may be beyond our control, such as market conditions or government incentive programs.

In addition, our competitors may choose to enter into strategic alliances or form affiliates with other competitors to our detriment.

Suppliers or subcontractors may merge with our competitors which may limit the choice of subcontractors we have available to us which may limit the flexibility of our overall service capabilities. There can be no assurance that our current or potential competitors will not offer the services we provide comparable or superior to those that we offer at the same or lower prices; adapt more quickly to industry challenges; or expand their operations at a faster pace than we do. Increased competition may result in price reductions, reduced profit margins and loss of market share, thereby causing a material adverse effect on our operations, prospects and financial condition.

4. *Orders in our order book may be delayed, modified or cancelled and letters of intent may be withdrawn or may not translate to confirmed orders, which may have a material adverse effect on our business, results of operations and financial condition.*

Due to changes in project scope and schedule, we cannot predict with certainty when, or if the solar power projects in our order book will be performed. In addition, when a project proceeds as scheduled, it is possible that our customers may default and fail to pay amounts due. We cannot guarantee that the income anticipated in our order book will be realized on time, or at all. Any project cancellations or scope adjustments, which may occur from time to time, could reduce the amount of our order book and the income and profits that we ultimately earn from the contracts. Any delay, cancellation or payment default could have a material adverse effect on our business, results of operations and financial condition.

For some of the contracts in our order book, our customers are obliged to perform or take certain actions, such as acquiring land, securing rights of way, clearing forests, supplying owner-supplied material, securing required licenses, authorizations or permits, making advance payments or procuring financing, approving designs, approving supply chain vendors and shifting existing utilities. If customers do not perform these and other actions in a timely manner or at all, and the possibility of such failure is not provided for in the EPC contract, our projects could be delayed, modified or cancelled and as a result, our business, results of operations and financial condition could be materially and adversely affected.

5. *Our business operations rely on consistent solar weather conditions and unfavourable solar weather conditions could have a material adverse effect on our business, financial condition and results of operations.*

Solar power is highly dependent on weather conditions and the profitability of our operations depends not only on observed solar conditions at the project site but also on the consistency of those solar conditions. Unfavourable weather conditions might make solar power projects less effective, lower their output below their rated capacity, force the shutdown of vital equipment, make solar power projects more difficult to operate and have a materially negative impact on our projected revenues and cash flows. The installation of solar power projects could be unexpectedly delayed by persistently unfavourable weather, which could postpone project completion and have a materially negative impact on our business, financial situation, and operational results.

6. *The average cost of acquisition of Equity Shares by our Promoters could be lower than the issue price.*

Our Promoters' average cost of acquisition of Equity Shares in our Company is lower than the Issue Price of the shares proposed to be offered through this Prospectus. For further details regarding average cost of acquisition of Equity Shares by our Promoters in our Company, please refer to page 19 of this Prospectus.

7. *We have issued Equity Shares during the last one year at a price that may be below the Issue Price.*

During the last one year we have issued Equity Shares at a price that is lower than the Issue Price as detailed in the following table:

Date of allotment	Number of Equity Shares allotted	Face value (₹)	Issue Price (₹)	Nature of Consideration	Nature of allotment
May 24, 2023	67,10,000	10.00	NIL	Other than Cash	Bonus Issue
June 13, 2023	7,07,000	10.00	52.50	Cash	Preferential Allotment

8. *Our Promoters and members of the Promoter Group will continue jointly to retain majority control over our Company even after the Issue which will allow them to determine the outcome of matters submitted to shareholders for approval.*

Post this Issue, our Promoters and Promoter Group will collectively own 61.41% of our post issue equity share capital. As a result, our Promoters, together with the members of the Promoter Group, will continue to exercise a significant degree of influence over the Company and will be able to control the outcome of any proposal that can be approved by a majority shareholder vote, including, the election of members to our Board, in accordance with the Companies Act, 2013 and our Articles of Association. Such a concentration of ownership may also have the effect of delaying, preventing or deterring a change in control of our Company. In addition, our Promoters will continue to have the ability to cause us to take actions that are not in, or

may conflict with, our interests or the interests of some or all of our creditors or other shareholders and we cannot assure you that such actions will not have an adverse effect on our future financial performance or the price of our Equity Shares.

9. Our Company has availed ₹ 1104.65 Lakh as unsecured loan which are repayable on demand. Any demand from the lenders for repayment of such unsecured loan may affect our financial condition.

Our Company has, as per the restated standalone audited financial statement, availed total sum of ₹ 1104.65 Lakh unsecured loan from Banks, Financial Institutions, Body Corporates and others which may be recalled at any time. Sudden recall may disrupt our operations and also may force us to opt for funding at unviable terms resulting in higher financial burden. Further, we will not be able to raise funds at short notice and thus result in shortage of fund. For further details, please refer to the section —Restated Standalone Statement of Long-Term Borrowing on page 175 of this Prospectus. Any demand for the repayment of such unsecured loan, may adversely affect our cash flow and financial condition.

10. There may be potential conflicts of interest if our Promoters or Directors get involved in any business activities that compete with or are in the same line of activity as our business operations.

At present none of our Promoter are engaged in any other business having object similar to the line of business of our Company. However, there can be no assurance that our Promoter or members of the Promoter Group will not compete with our existing business or any future business that we may undertake or that their interests will not conflict with ours. Any such future conflicts could have a material adverse effect on our reputation, business, results of operations and financial condition which may adversely affect our profitability and results of operations.

11. Several of our key raw materials and components are sourced from a single or a limited group of global third-party suppliers giving rise to supplier concentration risks. Any restrictions in supply or defects in quality could cause delays in project construction or implementation and impair our ability to provide our services to customers at a price that is profitable to us, which could have a material adverse effect on our business, financial condition and results of operations.

Our failure to obtain raw materials and components that meet our quality, quantity and cost requirements in a timely manner could interrupt or impair our ability to provide our services or increase our operating costs. We depend on a limited number of suppliers for our key raw materials. As a result, any failure of any of our suppliers to perform could disrupt our global supply chain and materially and adversely affect our operations. In addition, we engage with local and global suppliers for raw materials for our projects and any adverse regulations for engaging local suppliers; import and export restrictions; transportation and related infrastructure failures; or deterioration in diplomatic relationships and bilateral trade disputes could increase supply costs, which could have a material adverse effect on our operations and financial condition. For instance, anti-dumping and countervailing or anti-subsidy duties imposed on solar PV cells imported from certain countries, such as China, may restrict our choice of suppliers, which may result in increased supply costs for our projects, materially and adversely affecting our profitability, financial condition and results of our operations.

Please read the below mentioned table for ascertaining the dependency of our company on few suppliers:

S. No.	Name of the supplier	Financial Year	Amount paid for purchasing supplies	% of the amount in terms of total supplies purchased in the relevant year *
1.	Zetwerk Mfg Business Private Limited	2022-23	32,71,67,902.09	32.15

*The % has been derived by dividing the total amount of purchases made from the said supplier with the total no. of raw material purchases made by the company in the relevant year as mentioned in the note no. XXIV of restated financial accounts of the company.

- 12. We do not own the premises in which our registered office, corporate office and warehouse are located and the same are on lease arrangement. Any termination of such lease/license and/or non-renewal thereof and attachment by Property Owner could adversely affect our operations.**

Our Registered Office is presently located at, Flat No. 412A, Building No. 43, Chiranjiv Tower, Nehru Place, New Delhi – 110019, our corporate office is presently located at C -103, C Block, Sector 2, Noida, Uttar Pradesh-201301 and our warehouse is located at 202-203, Udyog Kendra Extn-II, Gautam Budh Nagar, Greater Noida, 201306. Unless it is renewed, upon termination of the lease, we are required to return the premises of our registered office and corporate office to the Lessor/Licensor. There can be no assurance that the term of the agreements will be renewed on commercially acceptable terms and in the event the Lessor/Licensor terminates or does not renew the agreements, we are required to vacate the said premises where operational activities are carried out. In such a situation, we have to identify and take alternative premises and enter into fresh lease or leave and license agreement at less favourable terms and conditions to shift our registered office and operations. Such a situation could result in time overruns and may affect our operations temporarily.

- 13. Our success will depend on our ability to attract and retain our key managerial personnel, our design and engineering team and other key personnel. Failure to do so may have a material adverse effect on our business, financial condition and results of operations.**

Our success heavily depends upon the continued services of our Key Managerial Personnel, along with support of our Promoters. We also depend significantly on our Key Managerial Personnel for executing our day-to-day activities. The loss of any of our Promoters and Key Management Personnel, or failure to recruit suitable or comparable replacements, could have an adverse effect on us. The loss of service of the Promoters and other senior management could seriously impair the ability to continue to manage and expand the business efficiently. If we are unable to retain qualified employees at a reasonable cost, we may be unable to execute our growth strategy. For further details of our Directors and Key Managerial Personnel, please refer to chapter — “Our Management” beginning on page 145.

- 14. Change in technology, evolving customer requirements and emerging industry trends may affect our business, may render our current technologies obsolete and may require us to make substantial capital investments.**

Our ability to respond to technological advances, evolving customer requirements, and emerging industry standards and practises in a cost-effective and timely manner is critical to our future success. The development and implementation of such technology entails significant technical and business risk, as well as significant implementation costs. We cannot guarantee that new technologies will be successfully implemented or that our processing systems will be able to adapt to changing customer requirements or emerging industry standards. Technological advancements may make newer solutions more competitive than ours, or they may necessitate additional capital expenditures to upgrade our facilities and technology. If we are unable, for technical, legal, financial or other reasons, to adapt in a timely manner to changing market conditions, evolving customer requirements or technological changes, our business, financial condition and results of operations could be materially and adversely affected.

- 15. There are certain discrepancies and non-compliances noticed in some of our corporate records relating to forms filed with the Registrar of Companies, taxation authorities and other public authorities.**

In the past, there have been some instances of delays in filing statutory forms with the RoC which includes MGT- 14, SH-7, INC-27, PAS-3, DIR-12, AOC-4 XBRL, MGT-7 with the additional fees. Also, we have delayed in filing few of our GST returns, delay in the payment of advance taxes, custom duty, delay in the contribution in Employee Provident Fund, delay in the contribution in Employee State Insurance with the concerned offices on several instances and have accordingly been subjected to penalty and charged with interest for delayed deposit of tax on various instances as well.

Further with the expansion of our operations there can be no assurance that deficiencies in our internal controls and compliances will not arise, or that we will be able to implement, and continue to maintain, adequate measures to rectify or mitigate any such deficiencies in our internal controls, in a timely manner or at all.

- 16. Our Company has in the past entered into related party transactions and may continue to do so in the future. There can be no assurance that such transactions, individually or in the aggregate, will not have an adverse effect on our Company's financial condition and results of operations.**

As on March 31, 2023, we have entered into related party transactions with our Promoter, Directors and Group Companies which are in compliance with applicable provisions of the Companies Act, 2013 and all other applicable laws. Whilst these related party transactions have been disclosed in our financial statements as per AS-18, and we believe that all such transactions have been conducted on an arms-length basis, we cannot assure you that we may not have achieved more favourable terms had such transactions been entered into with unrelated parties. There can be no assurance that such transactions, individually or in the aggregate, will not have an adverse effect on our business, prospects, results of operations and financial condition, including because of potential conflicts of interest or otherwise. For further details kindly refer to the chapter titled 'Financial Statements' beginning on page 171 of this Prospectus.

17. Dependency on top 10 customers

There are potential risks associated with dependency on a limited number of customers. Relying on a small group of customers for a significant portion of revenue may expose the company to volatility and potential disruptions in its business operations. Any adverse changes in these customer relationships, such as a loss of a key customer or a decrease in their demand, could impact the company's financial performance.

Please read the below mentioned table for ascertaining the dependency of our company on few customers:

S. No.	Name of the Customer	Financial Year	Amount received	% of the amount in terms of total turnover in the relevant year *

18. Over-runs/delays in under-construction projects

Over-runs and delays in under-construction projects pose a notable risk. Such occurrences can lead to increased costs, strained resources, and potential reputational damage. Delays may result from unforeseen circumstances, such as adverse weather conditions, regulatory hurdles, or labour shortages. Over-runs can strain the company's budget, profitability, and cash flow, potentially impacting its financial stability. Following are few of the instances that has happened in past where the projects were delivered beyond the estimated timelines:

Client Name	Capacity Of The Project	Po Date	Estimated Completion	Actual Completion	Reason Of Delay	Financial Cost Incurred By The Company For Such Delay
Indian Synthetic Rubber Private Limited	2700	09/09/2022	06/02/2023	28/02/2023	Delayed due to late design approval, causing a delay of almost 1 month.	The delay in designing and regulatory approvals for the solar project resulted loss of working

						capital interest and extra man days charges, which collectively led to a financial burden of 0.09% of project value.
Skill Council For Green Jobs	450	30/09/2022	29/12/2022	30/01/2023	Project delayed due to regulatory issues. 19. The outbreak of COVID-19 or outbreak of any other severe communicable disease could have a potential impact on our business, financial condition and results of operations.

One significant risk factor related to COVID-19 is the disruption in supply chains. We heavily relies on a various suppliers for components, raw materials, and equipment. Due to the pandemic, many countries implemented lockdowns, travel bans, and restrictions on manufacturing activities. As a result, our company too faced delays or shortages in the availability of necessary inputs during the year 2020.

If for any reason the same situation arises, it may affect the production schedules of solar panel manufacturers, potentially leading to project delays or increased costs. Moreover, if certain components or raw materials are sourced from heavily affected regions, their production and distribution may be severely impacted, causing prolonged delays in fulfilling orders or even halting production altogether.

The risk of disruption in supply chains highlights the importance for solar panel companies to diversify their supplier base geographically and establish contingency plans for alternative sources of essential components. It also underscores the need for effective communication and collaboration with suppliers to anticipate and mitigate potential disruptions, ensuring a steady supply of materials and minimizing the impact on production and project timelines. However, the uncertainty and risk associated with COVID-19 cannot be completely ignored.

24. In addition to normal remuneration, other benefits and reimbursement of expenses some of our Promoters who are directors as well, hold Equity Shares in our Company and may be interested in our Company to the extent of interest received on loan given, their shareholding and dividend entitlement in our Company

For further details, please refer "Dividend Policy" on page 170 of this Prospectus.

We are operating in an industry which is highly competitive in nature. Further, for execution of our projects, we require highly skilled labours. Further, the installation or the setup can be done only at the location/site of the client. Thus, lockdown and suspension of commercial operations due to any reason, including pandemic, will affect the growth of our business and results of our operations.

28. *Our growth will depend on our ability to build our brand and failure to do so will negatively impact our ability to effectively compete in this industry.*

Building a strong brand is a critical factor for any business to succeed in today's competitive marketplace. Your brand is how your customers perceive your company and what sets you apart from your competitors. A strong brand can create customer loyalty, increase brand awareness, and ultimately drive revenue growth.

We believe that we need to continue to build our brand, “**True Re or Oriana**”, which will be critical for achieving wide spread recognition of our services. Promoting and positioning our brand will depend largely on the success of our marketing efforts and our ability to provide high quality services. The brand promotion activities that we may undertake may not yield increased revenues, and even if they do, any increased revenues may not offset the expenses we incur in building our brand. If we are unable to promote and maintain our brand, our business, financial condition and results of operations could be adversely affected.

29. *There is no monitoring agency appointed by Our Company to monitor the utilization of the Issue proceeds.*

STT will be levied on and collected by a domestic stock exchange on which the Equity Shares are sold. Any gain realised on the sale of Equity Shares held for more than 12 months to an Indian resident, which are sold other than on a recognized stock exchange and on which no STT has been paid, will be subject to long term capital gains tax in India. However, any gain realized on the sale of listed Equity Shares held for a period of 12 months or less will be subject to short term capital gains tax in India. Prior to this Issue, there has been no public market for our Equity Shares. Share India Securities Limited is acting as Market Maker for the Equity Shares of our Company. However, the trading price of our Equity Shares may fluctuate after this Issue due to a variety of factors, including our results of operations and the performance of our business, competitive conditions, general economic, political and social factors, the performance of the Indian and global economy and significant developments in India's fiscal regime, volatility in the Indian and global securities market, performance of our competitors, the Indian Capital Markets, changes in the estimates of our performance or recommendations by financial analysts and announcements by us or others regarding contracts, acquisitions, strategic partnerships, joint ventures, or capital commitments. In addition, if the stock markets experience a loss of investor confidence, the trading price of our Equity Shares could decline for reasons unrelated to our business, financial condition or operating results. The trading price of our Equity Shares might also decline in reaction to events that affect other companies in our industry even if these events do not directly affect us. Each of these factors, among others, could materially affect the price of our Equity Shares. Any instance of disinvestments of equity shares by our Promoters or by other significant shareholder(s) may significantly affect the trading price of our Equity Shares. Further, our market price may also be adversely affected even if there is a perception or belief that such sales of Equity Shares might occur. There can be no assurance that an active trading market for our Equity Shares will develop or be sustained after this Issue, or that the price at which our Equity Shares are initially offered will correspond to the prices at which they will trade in the market subsequent to this Issue. These regulations can be amended/ changed on a short notice at the discretion of the Government. If we fail to comply with all applicable regulations or if the regulations governing our business or their implementation change adversely, we may incur increased costs or be subject to penalties, which could disrupt our operations and adversely affect our business and results of operations.

- 35. *You may be subject to Indian taxes arising out of capital gains on the sale of the Equity Shares.***

Under current Indian tax laws, capital gains arising from the sale of equity shares within 12 months in an Indian company are classified as short-term capital gains and generally taxable. Any gain realized on the sale of listed equity shares on a stock exchange that are held for more than 12 months is considered as long-term capital gains and is taxable at 10%, in excess of Rs.1,00,000. Any long-term gain realized on the sale of equity shares, which are sold other than on a recognized stock exchange and on which no STT has been paid, is also subject to tax in India. Capital gains arising from the sale of equity shares are exempt from taxation in India where an exemption from taxation in India is provided under a treaty between India and the country of which the seller is resident. Generally, Indian tax treaties do not limit India’s ability to impose tax on capital gains. As a result, residents of other countries may be liable to pay tax in India as well as in their own jurisdiction on a gain on the sale of equity shares.

- 37. *Taxes and other levies imposed by the Government of India or other State Governments, as well as other financial policies and regulations, may have a material adverse effect on our business, financial condition and results of operations.***

Taxes and other levies imposed by the Central or State Governments in India that affect our industry include

- custom duties on imports of raw materials and components;
- Goods and Service

These taxes and levies affect the cost and prices of our products and therefore demand for our product. An increase in any of these taxes or levies, or the imposition of new taxes or levies in the future, may have a material adverse effect on our business, profitability and financial condition.

- 38. *Political instability or a change in economic liberalization and deregulation policies could seriously harm business and economic conditions in India generally and our business in particular.***

The Government of India has traditionally exercised and continues to exercise influence over many aspects of the economy. Our business and the market price and liquidity of our Equity Shares may be affected by interest rates, changes in Government policy, taxation, social and civil unrest and other political, economic or other developments in or affecting India. The rate of economic liberalization could change, and specific laws and policies affecting the information technology sector, foreign investment and other matters affecting investment in our securities could change as well. Any significant change in such liberalization and deregulation policies could adversely affect business and economic conditions in India, generally, and our business, prospects,

financial condition and results of operations, in particular.

40. *Global economic, political and social conditions may harm our ability to do business, increase our costs and negatively affect our stock price.*

Global economic and political factors that are beyond our control, influence forecasts and directly affect performance. These factors include interest rates, rates of economic growth, fiscal and monetary policies of governments, inflation, deflation, foreign exchange fluctuations, consumer credit availability, fluctuations in commodities markets, consumer debt levels, unemployment trends and other matters that influence consumer confidence, spending and tourism. Increasing volatility in financial markets may cause these factors to change with a greater degree of frequency and magnitude, which may negatively affect our stock prices.

There can be no assurance that any approval required from the RBI or any other government agency can be obtained on any particular terms or at all.

42. *The extent and reliability of Indian infrastructure could adversely affect our Company’s results of operations and financial condition.*

India’s physical infrastructure is in developing phase compared to that of many developed nations. Any congestion or disruption in its port, rail and road networks, electricity grid, communication systems or any other public facility could disrupt our Company’s normal business activity. Any deterioration of India’s physical infrastructure would harm the national economy, disrupt the transportation of goods and supplies, and add costs to doing business in India. These problems could interrupt our Company’s business operations, which could have an adverse effect on its results of operations and financial condition.

43. *Any downgrading of India’s sovereign rating by an independent agency may harm our ability to raise financing.*

Any adverse revisions to India’s credit ratings for domestic and international debt by international rating agencies may adversely impact our ability to raise additional financing, and the interest rates and other commercial terms at which such additional financing may be available. This could have an adverse effect on our business and future financial performance, our ability to obtain financing for capital expenditures and the trading price of our Equity Shares.

44. *Natural calamities could have a negative impact on the Indian economy and cause our Company’s business to suffer.*

India has experienced natural calamities such as earthquakes, tsunami, floods etc. in recent years. The extent and severity of these natural disasters determine their impact on the Indian economy. Prolonged spells of abnormal rainfall or other natural calamities could have a negative impact on the Indian economy, which could adversely affect our business, prospects, financial

condition and results of operations as well as the price of the Equity Shares.

45. *Terrorist attacks, civil unrests and other acts of violence or war involving India or other countries could adversely affect the financial markets, our business, financial condition and the price of our Equity Shares.*

Incidents such as the terrorist attacks in India, other incidents such as those in US, Russia, Ukraine, Indonesia, Madrid, London and other acts of violence may adversely affect the Indian stock markets where our Equity Shares will trade as well the global equity markets generally. Particular	Assumptions made and Justification
Current Assets	
Trade Receivables	Decreasing trend: The decreasing number of days for trade receivables, from 170 in 2021 to 106 in 2022 and further to 84 in 2023, indicates the company's efforts to improve its collection process and credit management. Improved efficiency: The assumption of 80 days in 2024 suggests Oriana Power Ltd's continued focus on enhancing cash flow by reducing the time taken to collect receivables.
Other Current Assets	Increased holding days: The assumption of an increase from 10 days in 2021 to 50 days in 2022 reflects a possible expansion in inventory levels, potentially due to increased production or purchasing activities. Optimization efforts: The subsequent decrease in holding days to 38 in 2023 and 36 in 2024 indicates the company's efforts to optimize inventory management, minimize excess stock, and improve cash flow.
Current Liabilities	
Trade Payables	Favorable payment terms: The decreasing trend in the number of days for trade payables, from 146 in 2021 to 97 in 2022, 40 in 2023, and 34 in 2024, suggests Oriana Power Ltd's ability to negotiate favorable payment terms with suppliers. Cash flow management: This reduction helps the company maintain a healthy cash flow position, potentially benefiting from discounts or extended payment periods.
Other current liabilities	Efficient management: The significant decrease in holding days for other current liabilities, from 117 in 2021 to 24 in 2022, indicates effective management of short-term obligations. Stable approach: The slight increase to 31 days in 2023 and 27 days in 2024 suggests a stable or slightly more conservative approach to managing these liabilities.

Detailed rationale for increase in working capital requirement for FY 22 as compared to FY 21 and for increased estimated capital requirements for FY 24

In 2022, the working capital increased from ₹6,924, 000 in 2021 to ₹67,278,000. There are several reasons for this substantial

increase. Firstly, the total sales rose significantly from ₹337,818,000 in 2021 to ₹1,013,843,000 in 2022. This increase in sales volume requires a higher amount of working capital to support the larger scale of operations, including purchasing more materials and maintaining increased inventories. Secondly, the cost of material consumed also experienced a significant increase, from ₹264,144,000 in 2021 to ₹862,873,000 in 2022. Higher material costs contribute to a higher working capital requirement. Lastly, there were also increases in employee benefit expenses and other expenses, further contributing to the overall working capital needs in 2022.

In 2024, the working capital is expected to increase due to expected increase in the total sales. Higher sales volumes require increased working capital to manage larger inventories, finance higher account receivables, and support the expanded operations. Additionally, the cost of material consumed is projected to be increased in 2024, reflecting the higher production requirements to meet the increased sales demand. These factors, along with other expenses such as employee benefits, finance costs, and depreciation, contribute to the increased working capital requirement in 2024.

GLOBAL ECONOMIC OUTLOOK IN FIVE CHARTS

Global economic activity is decelerating sharply as a result of synchronized monetary policy tightening to contain very high inflation, less favorable financial conditions, and disruptions from the Russian Federation’s invasion of Ukraine. According to the latest Global Economic Prospects report, global growth will slow from 2.9 percent in 2022 to 1.7 percent in 2023. The outlook has several downside risks, including the possibility of higher inflation, even tighter monetary policy, financial stress, and rising geopolitical tensions. To mitigate the impacts of recent negative shocks and promote a strong and inclusive recovery, policymakers need to prioritize reforms that support long-term growth prospects and bolster the resilience of vulnerable groups.

1. The global economy is perilously close to falling into recession

This year, the world economy is set to grow at the third weakest pace in nearly three decades, overshadowed only by the recessions caused by the pandemic and the global financial crisis. Growth has slowed to the extent that the global economy is perilously close to falling into recession—defined as a contraction in annual global per capita income. Major economies are undergoing a period of pronounced weakness, and the resulting spill overs are exacerbating other headwinds faced by emerging market and developing economies (EMDEs).

2. EMDEs are projected to experience subdued growth in 2023, with activity set to remain well below its pre-pandemic trend

In EMDEs (Emerging Market and Developing Economies), growth prospects have worsened materially, with the forecast for 2023 downgraded 0.8 percentage point to a subdued 3.4 percent . The downward revision results in large part from weaker external demand and tighter financing conditions. Downgrades to growth projections mean that EMDE activity is now expected to fall even further below its pre-pandemic trend over the forecast horizon. Moreover, per capita income growth is expected to be slowest where poverty is highest.

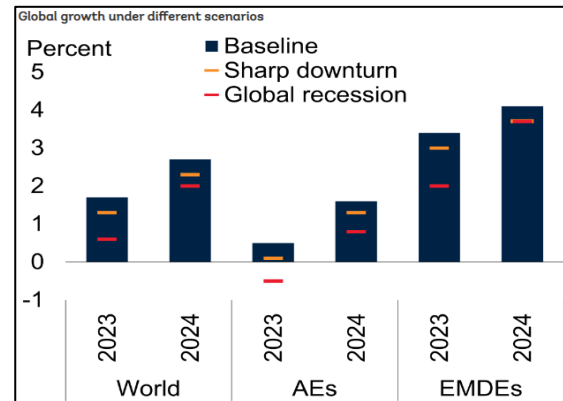

3. Headline inflation has started to abate but high core inflation in many countries has been unexpectedly persistent

Global inflation has been pushed higher by demand pressures, including from earlier policy support, and supply shocks, including disruptions to both global supply chains and the availability of key commodities. Inflationary pressures have begun to abate, reflecting softening demand and easing commodity prices, and inflation is rising in fewer countries. Although inflation is likely to gradually moderate through the year, high core inflation in many countries has been unexpectedly persistent.

4. Risks to the global outlook are tilted to the downside

The Global Economic Prospects report features model simulations to assess two downside scenarios for the global economy. In the first scenario, central banks tighten monetary policy more than expected in response to rising inflation expectations, resulting in global GDP growth falling to 1.3 percent in 2023. In the second scenario, major central banks' policy rates are even more restrictive, and markedly tighter financial conditions lead to significant financing difficulties across EMDEs, leaving the world in recession.

5. Global cooperation and decisive national policies are needed to bolster investment and growth prospects

The overlapping negative shocks of the past three years have weighed on investment—which is set to experience a feeble recovery—and long-term growth prospects in EMDEs. Prioritizing structural reforms to stimulate investment, promote food security, and foster gender equality can help to reverse the impact of these negative shocks and buttress resilience of vulnerable populations. Global cooperation is also needed to mitigate the risk of global recession, debt distress in EMDEs, safeguard the global commodity trading system, and accelerate the clean energy transition.

Forces Shaping the Outlook

The global fight against inflation, Russia's war in Ukraine, and a resurgence of COVID-19 in China weighed on global economic activity in 2022, and the first two factors will continue to do so in 2023.

In the fourth quarter of 2022, however, this uptick is estimated to have faded in most—though not all—major economies. US growth remains stronger than expected, with consumers continuing to spend from their stock of savings (the personal saving rate is at its lowest in more than 60 years, except for July 2005), unemployment near historic lows, and plentiful job opportunities. But elsewhere, high-frequency activity indicators (such as business and consumer sentiment, purchasing manager surveys, and mobility indicators) generally point to a slowdown.

COVID-19 deepens China's slowdown.

Economic activity in China slowed in the fourth quarter amid multiple large COVID-19 outbreaks in Beijing and other densely populated localities. Renewed lockdowns accompanied the outbreaks until the relaxation of COVID-19 restrictions in November and December, which paved the way for a full reopening. Real estate investment continued to contract, and developer restructuring is proceeding slowly, amid the lingering property market crisis. Developers have yet to deliver on a large backlog of presold housing, and downward pressure is building on house prices (so far limited by home price floors). The authorities have responded with additional monetary and fiscal policy easing, new vaccination targets for the elderly, and steps to support the completion of unfinished real estate projects. However, consumer and business sentiment remained subdued in late 2022. China's slowdown has reduced global trade growth and international commodity prices.

Monetary policy starts to bite.

Signs are apparent that monetary policy tightening is starting to cool demand and inflation, but the full impact is unlikely to be realized before 2024. Global headline inflation appears to have peaked in the third quarter of 2022 (Figure 1). Prices of fuel and nonfuel commodities have declined, lowering headline inflation, notably in the United States, the euro area, and Latin America. But underlying (core) inflation has not yet peaked in most economies and remains well above pre-pandemic levels. It has persisted amid second-round effects from earlier cost shocks and tight labor markets with robust wage growth as consumer demand has remained resilient. Medium-term inflation expectations generally remain anchored, but some gauges are up. These developments have caused central banks to raise rates faster than expected, especially in the United States and the euro area, and to signal that rates will stay elevated for longer. Core inflation is declining in some economies that have completed their tightening cycle—such as Brazil. Financial markets are displaying high sensitivity to inflation news, with equity markets rising following recent releases of lower inflation data in anticipation of interest rate cuts (Box 1), despite central banks’ communicating their resolve to tighten policy further. With the peak in US headline inflation and an acceleration in rate hikes by several non-US central banks, the dollar has weakened since September but remains significantly stronger than a year ago.

THE FORECAST BY IMF

Global growth, estimated at 3.4 percent in 2022, is projected to fall to 2.9 percent in 2023 before rising to 3.1 percent in 2024 (Table 1). Compared with the October forecast, the estimate for 2022 and the forecast for 2023 are both higher by about 0.2 percentage point, reflecting positive surprises and greater-than-expected resilience in numerous economies. Negative growth in global GDP or global GDP per capita—which often happens when there is a global recession—is not expected. Nevertheless, global growth projected for 2023 and 2024 is below the historical (2000–19) annual average of 3.8 percent.

The forecast of low growth in 2023 reflects the rise in central bank rates to fight inflation—especially in advanced economies—as well as the war in Ukraine. The decline in growth in 2023 from 2022 is driven by advanced economies; in emerging market and developing economies, growth is estimated to have bottomed out in 2022. Growth is expected to pick up in China with the full reopening in 2023. The expected pickup in 2024 in both groups of economies reflects gradual recovery from the effects of the war in Ukraine and subsiding inflation. Following the path of global demand, world trade growth is expected to decline in 2023 to 2.4 percent, despite an easing of supply bottlenecks, before rising to 3.4 percent in 2024.

These forecasts are based on a number of assumptions, including on fuel and nonfuel commodity prices, which have generally been revised down since October, and on interest rates, which have been revised up. In 2023, oil prices are projected to fall by about 16 percent, while nonfuel commodity prices are expected to fall by, on average, 6.3 percent. Global interest rate assumptions are revised up, reflecting intensified actual and signalled policy tightening by major central banks since October.

For advanced economies, growth is projected to decline sharply from 2.7 percent in 2022 to 1.2 percent in 2023 before rising to 1.4 percent in 2024, with a downward revision of 0.2 percentage point for 2024. About 90 percent of advanced economies are projected to see a decline in growth in 2023.

- In the United States, growth is projected to fall from 2.0 percent in 2022 to 1.4 percent in 2023 and 1.0 percent in 2024. With growth rebounding in the second half of 2024, growth in 2024 will be faster than in 2023 on a fourth-quarter-over-fourth-quarter basis, as in most advanced economies. There is a 0.4 percentage point upward revision for annual growth in 2023, reflecting carryover effects from domestic demand resilience in 2022, but a 0.2 percentage point downward revision of growth in 2024 due to the steeper path of Federal Reserve rate hikes, to a peak of about

(Percent, year over year)

Note: The figure shows the developments in headline and core inflation across 18 advanced economies and 17 emerging market and developing economies. Core inflation is the change in prices for goods and services, but excluding those for food and energy (or the closest available measure). For the euro area (and other European countries for which the data are available), energy, food, alcohol, and tobacco are excluded. The gray bands depict the 10th to 90th percentiles of inflation across economies.

5.1 percent in 2023.

- Growth in the euro area is projected to bottom out at 0.7 percent in 2023 before rising to 1.6 percent in 2024. The 0.2 percentage point upward revision to the forecast for 2023 reflects the effects of faster rate hikes by the European Central Bank and eroding real incomes, offset by the carryover from the 2022 outturn, lower wholesale energy prices, and additional announcements of fiscal purchasing power support in the form of energy price controls and cash transfers.
- Growth in the United Kingdom is projected to be –0.6 percent in 2023, a 0.9 percentage point downward revision from October, reflecting tighter fiscal and monetary policies and financial conditions and still-high energy retail prices weighing on household budgets.
- Growth in Japan is projected to rise to 1.8 percent in 2023, with continued monetary and fiscal policy support. High corporate profits from a depreciated yen and earlier delays in implementing previous projects will support business investment. In 2024, growth is expected to decline to 0.9 percent as the effects of past stimulus dissipate.

For emerging market and developing economies, growth is projected to rise modestly, from 3.9 percent in 2022 to 4.0 percent in 2023 and 4.2 percent in 2024, with an upward revision of 0.3 percentage point for 2023 and a downward revision of 0.1 percentage point for 2024. About half of emerging market and developing economies have lower growth in 2023 than in 2022.

- Growth in emerging and developing Asia is expected to rise in 2023 and 2024 to 5.3 percent and 5.2 percent, respectively, after the deeper-than-expected slowdown in 2022 to 4.3 percent attributable to China’s economy. China’s real GDP slowdown in the fourth quarter of 2022 implies a 0.2 percentage point downgrade for 2022 growth to 3.0 percent—the first time in more than 40 years with China’s growth below the global average. Growth in China is projected to rise to 5.2 percent in 2023, reflecting rapidly improving mobility, and to fall to 4.5 percent in 2024 before settling at below 4 percent over the medium term amid declining business dynamism and slow progress on structural reforms. Growth in India is set to decline from 6.8 percent in 2022 to 6.1 percent in 2023 before picking up to 6.8 percent in 2024, with resilient domestic demand despite external headwinds. Growth in the ASEAN-5 countries (Indonesia, Malaysia, Philippines, Singapore, Thailand) is similarly projected to slow to 4.3 percent in 2023 and then pick up to 4.7 percent in 2024.
- Growth in emerging and developing Europe is projected to have bottomed out in 2022 at 0.7 percent and, since the October forecast, has been revised up for 2023 by 0.9 percentage point to 1.5 percent. This reflects a smaller economic contraction in Russia in 2022 (estimated at –2.2 percent compared with a predicted –3.4 percent) followed by modestly positive growth in 2023. At the current oil price cap level of the Group of Seven, Russian crude oil export volumes are not expected to be significantly affected, with Russian trade continuing to be redirected from sanctioning to non-sanctioning countries.
- In Latin America and the Caribbean, growth is projected to decline from 3.9 percent in 2022 to 1.8 percent in 2023, with an upward revision for 2023 of 0.1 percentage point since October. The forecast revision reflects upgrades of 0.2 percentage point for Brazil and 0.5 percentage point for Mexico due to unexpected domestic demand resilience, higher-than-expected growth in major trading partner economies, and in Brazil, greater-than-expected fiscal support. Growth in the region is projected to rise to 2.1 percent in 2024, although with a downward revision of 0.3 percentage point, reflecting tighter financial conditions, lower prices of exported commodities, and downward revisions to trading partner growth.
- Growth in the Middle East and Central Asia is projected to decline from 5.3 percent in 2022 to 3.2 percent in 2023, with a downward revision of 0.4 percentage point since October, mainly attributable to a steeper-than-expected growth slowdown in Saudi Arabia, from 8.7 percent in 2022 (which was stronger than expected by 1.1 percentage points) to 2.6 percent in 2023, with a negative revision of 1.1 percentage points. The downgrade for 2023 reflects mainly lower oil production in line with an agreement through OPEC+ (Organization of the Petroleum Exporting Countries, including Russia and other non-OPEC oil exporters), while non-oil growth is expected to remain robust.
- In sub-Saharan Africa, growth is projected to remain moderate at 3.8 percent in 2023 amid prolonged fallout from the COVID-19 pandemic, although with a modest upward revision since October, before picking up to 4.1 percent in 2024. The small upward revision for 2023 (0.1 percentage point) reflects Nigeria’s rising growth in 2023 due to measures to address insecurity issues in the oil sector. In South Africa, by contrast, after a COVID-19 reopening rebound in 2022, projected growth more than halves in 2023, to 1.2 percent, reflecting weaker external demand, power shortages, and structural constraints.

INDIAN ECONOMIC

India is set to be the second-fastest growing economy in the G20 in FY 2022-23, despite decelerating global demand and the tightening of monetary policy to manage inflationary pressures. GDP growth will slow to 5.7% in FY 2023-24, as exports

and domestic demand growth moderate. Inflation will crimp private consumption but moderate at the end of the projection period, helping, along with improved global conditions, to boost growth to 6.9% in FY 2024-25, in line with the 20-year average (excluding the COVID-19 recession). After a spike in 2022, the current account deficit will narrow as import price pressures abate. High medium-term global uncertainty reinforces the importance of continued efforts to raise potential output growth and resilience. Macroeconomic stability should be pursued through monetary policy geared towards anchoring inflation expectations and fiscal policy oriented towards debt control and targeting of current and capital spending. Improvements in the business climate, when combined with financial deepening and skills development, can boost investment and infrastructure and create more and better jobs.

The strong recovery has slowed

Economic growth has lost momentum over the summer, due to a combination of erratic rainfall, which impacted sowing activities, and falling purchasing power. Concerns over demand conditions are considerable in services and infrastructure sectors, while consumers have become cautious regarding non-essential spending due to higher prices for food and energy. Tighter financial market conditions are weighing on the demand for capital goods, a leading indicator for aggregate investment. Export growth remains well-oriented, especially for services, and the progressive entry into force of comprehensive trade agreements with major partners is helping to improve prospects. Nonetheless, the monthly energy and food import bill keeps rising and the current account deficit widened in the July-September quarter to 2.9% of GDP. Headline inflation remains above 6% (the central bank’s upper bound of the tolerance band), mostly due to the trend increase in the price of food (which in India accounts for a larger share of the consumer basket than in any other G20 country). Unemployment estimates suggest improving labour market conditions in both urban and rural areas, but there are few signs of a wage-inflation spiral.

Macroeconomic policies are turning restrictive

In line with the central bank’s commitment to take calibrated action to bring headline inflation back within the 2-6% tolerance band and keep inflation expectations anchored, policy rates are expected to rise by 75bps, to reach 6.65% in February 2023 before the tightening cycle is paused. In fighting inflation, monetary policy is complemented by cuts in excise taxes and a series of measures taken by the government, such as the export bans on wheat, wheat flour, sugar and broken rice and a 20% export duty on some varieties of non-basmati rice. Such trade restrictions must be temporary, use transparent methodologies to determine their duration, and give due consideration to the effects on trading partners’ food security. Expanding infrastructure spending, such as on highways and railways, occupies a central position in the government strategy. These programmes are being successfully implemented, surmounting some technical obstacles at the state level. At the same time, prolonged targeted and non-targeted fiscal measures and rising interest rates weigh on the public debt. On current trends, tax collection will surpass the budgeted projections by the end of FY 2022-23, due to higher inflation and better compliance, thus reducing borrowing requirements. The projections assume fiscal tightening in the next biennium. There still remain considerable margins to improve efficiency, accountability, and transparency of public spending, devoting more resources to health and education and building fiscal space to enhance resilience.

The economy will not escape the global slowdown

After hitting 6.6% in FY 2022-23, GDP growth is expected to slow in coming quarters, to 5.7% in FY 2023- 24, before reverting to around 7% in FY 2024-25. CPI inflation will remain above the central bank’s upper limit target of 6% at least until early 2023 and then gradually recede as higher interest rates take effect. High inflation will slow household consumption and delay investment, as financing becomes more expensive, and exports will be affected by the economic slowdown in advanced countries and geopolitical tensions. Offsetting these forces, at least partially, some improvements can be expected

as more contact intensive services sectors normalise, including international tourism once borders are fully open and restrictions lifted. Most risks to the projections are tilted to the downside and include a deterioration of banks' assets quality, despite enhanced provisioning and the establishment of a 'bad bank', as well as possible delays in fiscal consolidation and in concluding bilateral trade negotiations. Declining geopolitical uncertainty, on the other hand, would boost confidence and benefit all sectors, as would faster-than-expected conclusion of freetrade agreements with key partners and the incorporation therein of services.

Road Ahead

In the second quarter of FY 2022-23, the growth momentum of the first quarter was sustained, and high-frequency indicators (HFIs) performed well in July and August of 2022. India's comparatively strong position in the external sector reflects the country's generally positive outlook for economic growth and rising employment rates. India ranked fifth in foreign direct investment inflows among the developed and developing nations listed for the first quarter of 2022.

India's economic story during the first half of the current financial year highlighted the unwavering support the government gave to its capital expenditure, which, in FY 2022–23 (until August 2022), stood 46.8% higher than the same period last year. The ratio of revenue expenditure to capital outlay decreased from 6.4 in the previous year to 4.5 in the current year, signaling a clear change in favour of higher-quality spending. Stronger revenue generation as a result of improved tax compliance, increased profitability of the company, and increasing economic activity also contributed to rising capital spending levels.

Despite the continued global slowdown, India's exports climbed at the second highest rate this quarter. With a reduction in port congestion, supply networks are being restored. The CPI-C and WPI inflation reduction from April 2022 already reflects the impact. In August 2022, CPI-C inflation was 7.0%, down from 7.8% in April 2022. Similarly, WPI inflation has decreased from 15.4% in April 2022 to 12.4% in August 2022. With a proactive set of administrative actions by the government, flexible monetary policy, and a softening of global commodity prices and supply-chain bottlenecks, inflationary pressures in India look to be on the decline overall.

GLOBAL INDUSTRY OVERVIEW

The global solar energy market was valued at \$52.5 billion in 2018 and is projected to reach \$223.3 billion by 2026, growing at a CAGR of 20.5% from 2019 to 2026.

Solar energy is the radiant energy emitted from the sun, which is harnessed by using various technologies such as solar heating, photovoltaic cells, and others. It is an efficient form of unconventional energy and a convenient renewable solution toward growing greenhouse emissions and global warming.

The growth of the solar energy market is driven by increase in environmental pollution and provision of government incentives & tax rebates to install solar panels. In addition, decrease in water footprint associated with solar energy systems has fuelled their demand in power generation sectors. The demand for solar cells has gained major traction owing to surge in rooftop installations, followed by increase in applications in the architectural sector. Furthermore, the demand for parabolic troughs and solar power towers in electricity generation is expected to boost the demand for concentrated solar power systems.

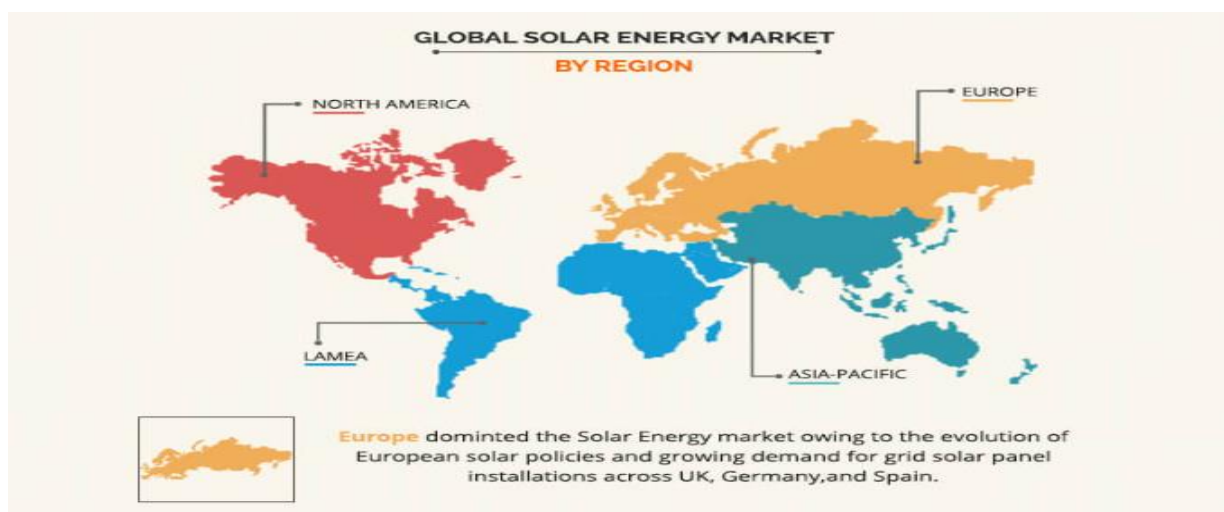

This global **solar energy market** size is segmented based on technology, application, component, marketing channel and region. Depending on technology, the market is classified as photovoltaic systems and concentrated solar power systems (parabolic trough, solar power tower, Fresnel reflectors and dish stirling). As per solar module, it is segregated into monocrystalline, polycrystalline, cadmium telluride, amorphous silicon cells and others. Based on application, it classified into residential, commercial and industrial. Depending on end use, the market is classified into electricity generation, lighting, heating and charging. Based on region, it is analyzed across North America (U.S., Canada, and Mexico), Europe (Germany, France, Italy, Spain, UK and rest of Europe), Asia-Pacific (China, India, Japan, South Korea, Australia, and rest of Asia-Pacific), and LAMEA (Brazil, South Africa, Israel, and rest of LAMEA).

Both monocrystalline and polycrystalline silicon cells have witnessed high demand, especially in residential applications.

Cadmium telluride and amorphous silicon cells are expected to create growth opportunities owing to low material cost. Increase in photovoltaic applications have fueled the demand for first-generation cells, which include both monocrystalline and polycrystalline silicon cells. The third-generation cells segment is expected to show high growth rate owing to ongoing R&D and increase in efficiency of solar panels. Increase in installations of solar energy systems in architecture and residential applications has provided lucrative opportunities for the market. However, the geographical footprint has affected the solar energy market, but increased investments in R&D and increase in adoption of solar storage systems are expected to boost the demand for solar energy systems.

Emerging economies such as China and Japan have significantly increased the production of solar technologies owing to governmental tariffs and merger & acquisition of local manufacturers. Moreover, North America and Europe have largely focused on researches to maximize the solar potential. Middle East and Africa have also gained traction owing to increase in applications of solar energy for power generation, agriculture, and architecture.

Market Dynamics

Drivers

The competition has significantly increased among manufacturers with the development in photovoltaic-based power distribution systems. Moreover, the price of solar modules differs significantly in regions of Europe and Asia-Pacific, as the

market is demand oriented. In addition, reduced profitability of module manufacturers and market acquisition stress lead to decline in the prices of solar panels. Furthermore, fluctuating price of silver, which is a major raw material in solar module, drives the demand for solar panel installations and assist the solar energy market growth.

Restraints

The adoption of PV system technology is marginally affected by factors such as reliability, overall production, and competitiveness. In addition, overall climatic conditions and geographical latitudes restrain the solar energy market growth, especially in snowfall- and rainfall-prone regions

Opportunities

The development of photovoltaic (PV) storage systems is essential to increase the ability of PV systems to replace the existing conventional sources. With the rise in demand for PV installations, the adoption of storage grid is projected to increase, which fuels the demand for lithium ion-powered battery for solar energy storage and increase the solar energy market growth.

The amorphous silicon cells segment is expected to witness maximum growth owing to increase in installations and utilization in solar panels. Moreover, the demand for copper indium gallium selenide (CIGS) is expected to increase during the forecast period, owing to rise in cost-effective solar panels. Furthermore, low-cost manufacturing and increase in efficiency of solar modules are projected to boost the demand for cadmium telluride during the forecast period in the solar energy industry.

LAMEA Market Review

Improper electricity network has increased the demand for solar energy in remote areas of Africa and Latin America. In addition, government incentives for solar panel installations have fueled the market growth.

INDIAN INDUSTRY OUTLOOK

India's energy demand is expected to increase more than that of any other country in the coming decades due to its sheer size and enormous potential for growth and development. Therefore, it is imperative that most of this new energy demand is met by low-carbon, renewable sources. India's announcement that it intends to achieve net zero carbon emissions by 2070 and to meet 50% of its electricity needs from renewable sources by 2030 marks a historic point in the global effort to combat climate change.

The Indian renewable energy sector is the fourth most attractive renewable energy market in the world. India was ranked fourth in wind power, fifth in solar power and fourth in renewable power installed capacity, as of 2020. Installed renewable power generation capacity has gained pace over the past few years, posting a CAGR of 15.92% between FY16-22. India is the market with the fastest growth in renewable electricity, and by 2026, new capacity additions are expected to double.

With the increased support of the Government and improved economics, the sector has become attractive from an investors perspective. As India looks to meet its energy demand on its own, which is expected to reach 15,820 TWh by 2040, renewable energy is set to play an important role.

Market Size

As of October 2022, India's installed renewable energy capacity (including hydro) stood at 165.94 GW, representing 40.6% of the overall installed power capacity.

The country is targeting about 450 Gigawatt (GW) of installed renewable energy capacity by 2030 – about 280 GW (over 60%) is expected from solar.

The non-hydro renewable energy capacity addition stood at 4.2 GW for the first three months of FY23 against 2.6 GW for the first three months of FY22.

Solar power installed capacity has increased by more than 18 times, from 2.63 GW in March 2014 to 49.3 GW at the end of 2021. In 2022, till November, India has added 12 GW of solar power capacity.

Power generation from renewable energy sources (not including hydro) stood at 16.18 billion units (BU) in September 2022,

up from 14.49 BU in September 2021.

With a potential capacity of 363 GW and with policies focused on the renewable energy sector, Northern India is expected to become the hub for renewable energy in India.

DEVELOPMENTS

According to the data released by the Department for Promotion of Industry and Internal Trade (DPIIT), FDI inflow in the Indian non-conventional energy sector stood at US\$ 12.57 billion between April 2000-June 2022. More than Rs. 5.2 lakh crore (US\$ 70 billion) has been invested in India's renewable energy sector since 2014. According to the analytics firm British Business Energy, India ranked 3rd globally in terms of its renewable energy investments and plans in 2020.

GOVERNMENT INITIATIVES

Some initiatives by Government of India to boost India's renewable energy sector are as follows:

- On November 19, Prime Minister Mr. Narendra Modi dedicated the 600 MW Kameng Hydro Power Station in Arunachal Pradesh to the country. The project, which covers more than 80 kilometres and costs about Rs. 8,200 crore (US\$ 1 billion), is located in Arunachal Pradesh's West Kameng District.
- On November 9, Minister for Finance & Corporate Affairs, Ms. Nirmala Sitharaman, approved the final Sovereign Green Bonds framework of India. The Paris Agreement's Nationally Determined Contribution (NDC) targets will be further strengthened by this approval, which will also aid in attracting foreign and domestic capital to green projects.
- In the Union Budget 2022-23, the allocation for the Solar Energy Corporation of India (SECI), which is currently responsible for the development of the entire renewable energy sector, stood at Rs. 1,000 crores (US\$ 132 million).
- In the Budget, the government allocated Rs. 19,500 crore (US\$ 2.57 billion) for a PLI scheme to boost manufacturing of high-efficiency solar modules.

- The government has spent US\$ 4.63 billion on hydroelectric projects to provide electricity to villages in Jammu and Kashmir from 2018-21.

ROAD AHEAD

India's ambitious renewables energy goals are transforming its power sector. Rising population and widespread electrification in rural homes is fuelling the demand for energy to power homes, businesses and communities. Clean energy will reduce pollution levels as villages become self-sustainable with their use of clean energy. In 2022, India's renewable energy sector is expected to boom with a likely investment of US\$ 15 billion this year, as the government focuses on electric vehicles, green hydrogen, and manufacturing of solar equipment.

It is expected that by 2040, around 49% of the total electricity will be generated by renewable energy as more efficient batteries will be used to store electricity, which will further cut the solar energy cost by 66% as compared to the current cost. Use of renewables in place of coal will save India Rs. 54,000 crore (US\$ 8.43 billion) annually. Around 15,000 MW of wind-solar hybrid capacity is expected to be added between 2020-25.

As per the Central Electricity Authority (CEA) estimates, by 2029-30, the share of renewable energy generation would increase from 18% to 44%, while that of thermal is expected to reduce from 78% to 52%. The CEA also estimates India's power requirement to grow to reach 817 GW by 2030.

India's target is to produce five million tonnes of green hydrogen by 2030. This will be supported by 125 GW of renewable energy capacity. 57 solar parks of aggregate capacity 39.28 GW have been approved in India. Wind Energy has an off-shore target of 30 GW by 2030 with potential sites identified.

- **Government commitments**

Reduce India's total projected carbon emission by 1 Bn Tonnes by 2030, reduce the carbon intensity of the nation's economy by less than 45% by the end of the decade, achieve net-zero carbon emissions by 2070.

- **Proposed solar cities and parks**

Solar city per state-approved and approved setting up 59 solar parks of 40 GW across the nation. The government is also giving a push to Floating PV Projects.

We have further explained our business activity below:

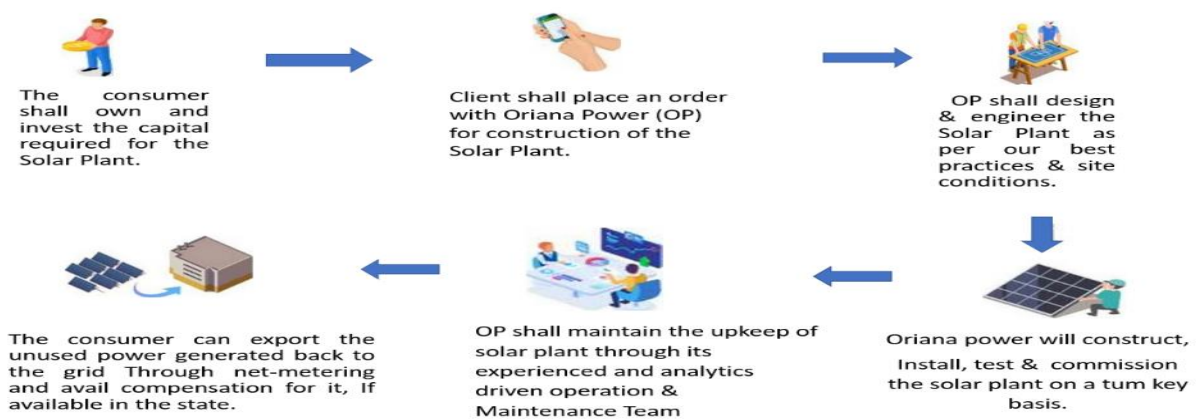

Our Business Model

We offer two types of models for our services:

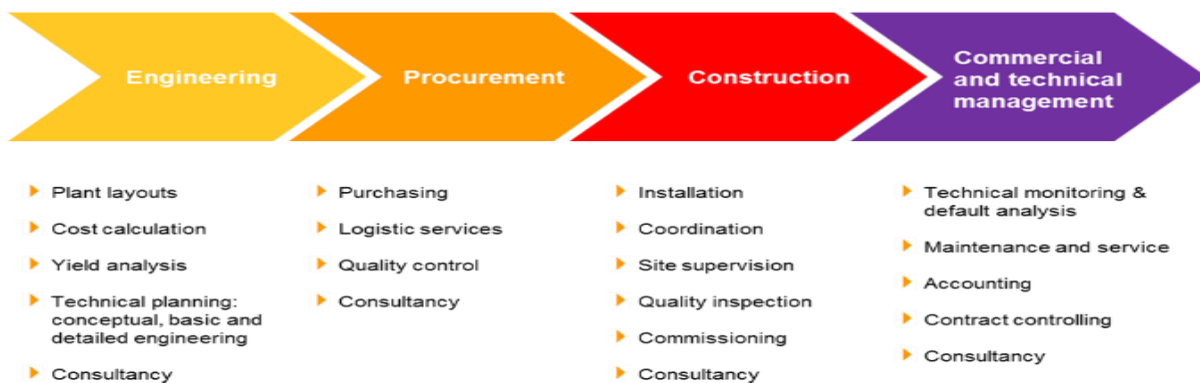

1. CAPEX Model (EPC)
2. RESCO Model (Opex)

Capex Model / EPC: Engineering, Procurement and Construction: CAPEX stands for Capital Expenditure. The CAPEX model is the most commonly employed model in India. In this model, consumers own the system, fund it, and consume the energy generated throughout the project life, so the consumer is responsible for the risks associated with the operation, management, and maintenance of the system. Often the consumer finances this through bank funding. The owner can apply for the capital subsidy provided through the CFA (Central Financial Assistance) and additional subsidies provided by the respective state governments. However, in this model, the owner has the maximum risk.

This model has several advantages, including a fast payback period, risk-accommodative returns, and sole ownership structure. However, it has several loopholes, such as high risks for investors, delays in subsidy disbursement, and risks in the export of additional energy to the utility. This model is common in the residential sector, where the consumers pay the entire cost up front; this type of model is common in other countries as well, such as Germany.

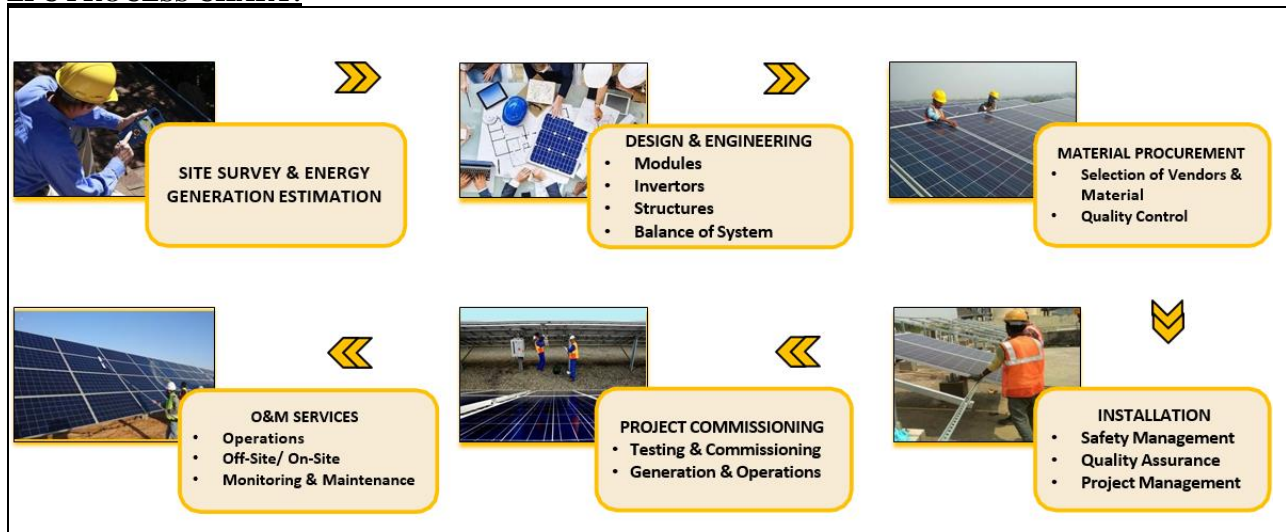

EPC refers to companies that deal with the Engineering, Procurement, Construction and Commissioning of solar systems. The EPC service provider is responsible for delivering a complete Photovoltaic (PV) power plant to the Asset Owner, handling all aspects from seeking authorisation for the construction to commissioning and securing a grid connection.

EPC Projects can be divided into following Phases:

1. **Engineering Phase:** The Engineering phase starts off as a basic technical concept, the engineering design is itself a process that evolves and is constantly refined as the project development advances into a detailed execution design blueprint, issued for construction. Once construction and commissioning are completed, a detailed set of “as built” documents is handed over to the O&M (Operation and Maintenance) service provider.
2. **Procurement Phase:** The Procurement phase covers the selection and purchase of components such as PV modules and inverters, and the identification and mitigation of risks through suitable inspection, testing and qualification mechanisms. It also involves supplier onboarding, and inspections and tests until the end of the procurement process.
3. **Construction Phase:** In the Construction phase, the solar power plant is installed based on installation manuals provided by suppliers. Construction works involve civil works (mounting structures) and electro-mechanical works (modules, inverters, etc.) and supervisory and monitoring equipment. Some parts of the construction may be subcontracted by the EPC service provider.
4. **Commissioning Phase:** System commissioning closes the construction phase of the solar power plant and begins the commercial operation period. Commissioning includes performance and reliability tests to make sure that the solar power plant is built according to international standards, best industry practice, and complies with the Owner’s requirements and grid specifications.

EPC PROCESS CHART:

BENEFITS OF EPC MODEL

a) Single point of contact:

With EPC, there is a single point of contact for the entire project, which helps to streamline communication and decision-making. This can help to reduce delays and improve overall project efficiency.

b) Accountability:

The EPC contractor is responsible for the entire project, from design and engineering to procurement and construction. This means that they are accountable for meeting project deadlines, staying within budget, and ensuring that the project meets all specifications.

c) Cost savings:

EPC contractors often have strong relationships with suppliers and can negotiate bulk discounts on materials and equipment. This can help to lower project costs and maximize value for the project owner.

d) Reduced risk:

With an EPC contract, the project owner transfers the risk of the project to the EPC contractor. This means that the contractor is responsible for managing any risks associated with the project, such as design errors or construction delays.

e) Quality assurance:

EPC contractors are responsible for ensuring that the project meets all relevant standards and regulations. This helps to ensure that the completed project is of high quality and meets all necessary requirements. Overall, the EPC contracting model can help to reduce project risks, improve project efficiency, and maximize value for project owners and stakeholders.

The salient features of the Capex (EPC) Model as follows:

- Client Investment & Ownership of Plant.
- After initial investment ROI, Power generated from Solar is absolutely free over a life span of up-to 25 years of the Project Life.
- Operation & Maintenance (O&M) taken care by Client.
- Short payback period on the investment done by Client.
- Absolute Ownership of Power Generated by Plant.
- Surplus Power Adjusted with DISCOM in Next Billing (as per state policies)

- Investment on Solar Power Plants is also subjected to accelerated depreciation which is an added incentive.
- Real Time Monitoring of Generation data through weekly analytical reports.
- Cost/ Unit electricity is approx. less INR 2.0 for over 25 years period.

OPERATION AND MAINTENANCE:

As one of the emerging solar power company, Oriana Power is dedicated to providing reliable and efficient solar energy solutions to its clients. In addition to providing state-of-the-art solar power plants, we also specialize in operation and maintenance (O&M) services. Our O&M services are tailored to meet the unique needs of each solar power plant, ensuring reliable and efficient operation.

Our business model for O&M services involves a fixed annual fee or a percentage of the plant's capacity or energy generated. This provides a reliable source of income while also ensuring we provide quality services to our clients.

Our team of highly-skilled professionals ensures that our clients receive the most reliable and efficient O&M services. With our expertise, we are able to identify and resolve issues before they escalate, which reduces downtime and maximizes energy output. By offering customized services that meet the needs of each individual solar plant, Oriana Power establishes a sustainable long-term revenue model. This not only creates a more predictable revenue stream for our clients but also ensures the long-term profitability and success of the solar power plant. At Oriana Power, we are dedicated to providing our clients with the most reliable and efficient solar energy solutions.

2. RESCO Model: The RESCO model (also known as the **OPEX model** or **BOOT** (Build, own, operate, transfer) involves an energy company, RESCO, arranging the necessary capital for the projects and bearing all of its associated risks. In this model, the developer makes an agreement with the roof-top owner. The rooftop owners may consume the electricity generated, for which they have to pay a pre decided tariff to RESCO developer on a monthly basis for the tenure of the agreement. In this model the Assets belong to Our Company and it gives annuity Income. This model is increasingly becoming attractive, and its share has increased over the years. However, the challenge is mobilizing low-cost capital for meeting the requirements of system deployment. We operate **our RESCO model business through our Eighteen (18)**

Subsidiaries.

The salient features of the RESCO Model as follows;

- BOOT (Build, own, operate, transfer) Model.
- Developer takes complete ownership and responsibility of the operations and maintenance of the system for the agreed duration of its lifetime.
- EPC Company take cares of everything including Operation & Management.
- Cost Per Unit Varies from INR 4.00–INR 6.00.
- Power Purchase Agreements (PPA) binds the Purchaser & the Power Producer

OUR PROJECTS:

1. Solar Roof Top Power Plant.

Solar rooftop refers to a type of solar panel installation that is mounted on the rooftop of a building, usually a residential or commercial building. Solar rooftop systems consist of solar panels that are installed on the roof of the building, and are connected to an inverter that converts the DC power produced by the solar panels into AC power that can be used by the building. Solar rooftop systems are becoming increasingly popular due to their ability to generate clean and renewable energy from the sun, reduce energy bills, and lower carbon emissions. They are typically installed on buildings with suitable roof space, good sun exposure, and little to no shading.

1.	We have completed solar roof top power projects for several key customers. We had set up solar roof top projects of more than 55 MW power. One of the projects is 250kWp Grid Connected Solar Power plant at Modern Delhi Public School, The Power purchase Agreement is entered on the 04 th March, 2019 at Faridabad by and between AAN Solar Private Limited (SPV of Oriana power) and Modern Delhi Public School for the period of 25 years. MDPS has installed 250kWp Rooftop Solar Power plant, which is saving more than 50% of their electricity cost and 280Tons of CO2 annually. This project was installed and operated by Oriana Power management. Surplus energy from solar will be adjusted by DHBVN on month-to-month basis.	<p>250kWp Grid Connected Solar Power plant at Modern Delhi Public School, Sec-86, Faridabad, Haryana</p> 

2. Floating Solar

This is a photovoltaic (PV) system that is put on bodies of water like lakes, reservoirs, or oceans. It is a newer technology that has gained favour in recent years due to various advantages over traditional solar systems

<p>1.</p>	<p>Visakhapatnam has installed its first floating solar plant at Meghadri Gedda reservoir. The plant features special anchoring technology that allows it to adjust to any water level with the support from anchors. The solar panels float on water with the help of foam platforms that also prevent water damage. and it will generate 4.2 million units of power annually but it will also reduce 3,960 tonnes of CO2 emissions every year. GVMC commissioner, stated that the GVMC could save 12 acre of land by setting up a power project at the reservoir.</p> <p>Some specific features of this project:</p> <ul style="list-style-type: none"> • 3 MWp Floating Solar Project Installation at Visakhapatnam. • Project was executed during toughest time of COVID-19 Pandemic, it is the first project of this size to be operational. <p>No safety hazards occurred during construction of the project.</p>	<p>GVMC Floating Solar Project – 3 MW</p> 
<p>2.</p>	<p>Some specific features of this Project:</p> <ul style="list-style-type: none"> • 1 MWp floating solar power plant at UCWL-Mines area. • Project installed in the Fresh water lake of Mines. • Heavy Evacuation for the Installation of the cables due to the rules and regulations laid down by DGMS. • Solid bed of the lake posed challenges for the anchoring of the Solar Power Plant, challenge countered by using Solid Concrete block for anchoring. 	<p>Udaipur Cement Works Limited – Mines Floating Solar Project – 1 MW</p> 

3. Ground Mounted Solar

As its name suggests, Ground-mounted solar refers to a solar panel installation that is mounted on the ground rather than on a rooftop. These systems typically consist of a series of solar panels that are installed on a steel or aluminium frame, which is anchored to the ground with concrete footings or other supports. Ground-mounted solar systems have the advantage of being easier to install and maintain than rooftop systems, since they are typically installed at ground level and do not require the use of ladders or other equipment to access the panels. Additionally, ground-mounted systems can be tilted to optimize the angle of the panels for maximum energy production.

4. Car Port Solar

A solar carport is a covered parking area with a canopy made from PV panels. Sometimes these carports are designed for a single parking spot – like in residential driveways. Other times, they might be strung together in a series to cover entire commercial parking lots. Solar carport structures use a ground-mounted model – except that the solar panels are installed even higher off the ground to provide enough clearance for parked vehicles. Some solar carports also come with in-built electric vehicle (EV) charging stations so that drivers can top up their batteries while out shopping or at home.

<p>Some Specific features of this project:</p> <ul style="list-style-type: none"> • TMC (Tata Memorial Center) invite online Lump sum tender for Design, supply, Installation, Testing and Commissioning of 1MW solar power plant including grid interactive to be installed on existing Car Port Structure. • Oriana power successfully win this bid of Tender • Estimated cost - Rs 421 Lakh + Applicable GST • The work shall be completed within 5 months from the date of letter of Intent. 	<p>Homi Bhabha Cancer Hospital & Research Centre – 1 MW</p> 

Today with expertise in Solar EPC and RESCO/OPEX project, we had a portfolio of more than 70 successful projects across India which include more than 4 MWp in floating solar projects, more than 13 MWp ground mounted projects and more than 55 MWp of rooftop projects. Today, we have a team of 56 peoples, who had a combined experience of more than 3000 MW.

KEY REGULATIONS AND POLICIES IN INDIA

The following is a brief overview of certain Indian laws and regulations which are relevant to our Company's business. The information detailed below has been obtained from various legislations, including rules and regulations promulgated by regulatory bodies that are available in the public domain. The overview set out below is not exhaustive and is only intended to provide general information, and is neither designed, nor intended, to be a substitute for professional legal advice. For details of government approvals obtained by our Company in compliance with these regulations, please see the section entitled "Government and Other Approvals" beginning on page 277. The statements below are based on the current provisions of Indian law, which are subject to change or modification by subsequent legislative, regulatory, administrative or judicial decisions.

Electricity Act, 2003

The Electricity Act is the central legislation which covers, among others, generation, transmission, distribution, trading and use of electricity. Under the Electricity Act, the transmission, distribution and trade of electricity are regulated activities that require licenses from the Central Electricity Regulatory Commission (—CERCI), the State Electricity Regulatory Commissions (—SERCs) or a joint commission (constituted by an agreement entered into by two or more state governments or the central government in relation to one or more state governments, as the case may be).

The generating company is required to establish, operate and maintain generating stations, tie-lines, sub-stations and dedicated transmission lines. Further, the generating company may supply electricity to any licensee or even directly to consumers, subject to availing open access to the transmission and distribution systems and payment of transmission charges, including wheeling charges and open access charges, as may be determined by the relevant electricity regulatory commission. In terms of the Electricity Act, open access means the non-discriminatory provision for the use of transmission lines or distribution system or associated facilities with such lines or system, by any licensee or consumer or a person engaged in generation in accordance with the regulations specified by the relevant electricity regulatory commission.

Under the Electricity Act, the appropriate commission shall specify the terms and conditions for the determination of tariff, and one of the guiding factors in doing so shall be the promotion of co-generation and generation of electricity from renewable sources of energy. The SERCs under the Electricity Act are also required to promote co-generation and generation of electricity from renewable sources of energy by providing suitable measures for connectivity with the grid and sale of electricity to any person, and also specify, for purchase of electricity from such sources, a percentage of the total consumption of electricity in the area of a distribution license.

National Renewable Energy Act, 2015

MNRE released the draft National Renewable Energy Act, 2015 on July 17, 2015. The draft Act provides for a framework to facilitate and promote the use of renewable energy. It aims to address issues that are not adequately covered under the Electricity Act, 2003, as amended ("Electricity Act") or its amendments with respect to renewable energy such as the principles of grid planning and operation and the concept of national targets and its compliance by utilities. It proposes provisions for facilitating generation of renewable energy through sound institutional structure, supportive eco-system, viable economic and financial framework and promotion of renewable energy applications including distributed and grid connected renewable electricity.

Among other things, the Act proposes to empower the GoI and State Governments to establish national renewable energy funds and state green funds respectively, in order to meet the expenses of implementing the national renewable energy policy and national renewable energy plan.

The Ministry of New and Renewable Energy ("MNRE")

The MNRE is the nodal ministry of the Government of India at the national level for all matters relating to non-conventional sources of energy and renewable energy. The mandate of MNRE includes research, development, commercialization and deployment of renewable energy systems or devices for various applications in rural, urban, industrial and commercial sector.

Draft Electricity (promoting renewable energy through Green Energy Open Access) Rules, 2022 ("Draft Electricity Rules 2022")

The Ministry of Power ("MoP") circulated the Draft Electricity Rules 2022 in August 2022 and is seeking public comments. The Draft Electricity Rules 2022 have been proposed for the purchase and consumption of green energy, including the energy from waste-to-energy plants. It will provide in detail for renewable purchase obligation (RPO), green energy open access, nodal agencies, procedure for the grant of green energy open access, banking and cross-subsidy surcharge. It also

provides for tariff for green energy which shall be determined by the appropriate commission.

MNRE Circular on imposition of Basic Customs Duty (BCD) on Solar PV Cells & Modules/ Panels

On March 9, 2021, MNRE issued a circular (ref. no. 283/3/2018- GRID SOLAR) in relation to imposition of BCD on solar cells and modules. According to the circular, no BCD will be charged on solar cells and modules upto March 31, 2022. From April 1, 2022, 25% and 40 % BCD will be charged on solar cells and solar modules, respectively.

Bureau of Indian Standards Act, 2016 (the “BIS Act”) and the Solar Photovoltaics, Systems, Devices and Components Goods (Requirements for Compulsory Registration) Order, 2017 (“Compulsory Registration Order”)

The Bureau of Indian Standards Act, 2016 provides for the establishment of bureau for the standardization, marking and quality certification of goods. Functions of the bureau include, inter alia, (a) recognizing as an Indian standard, any standard established for any article or process by any other institution in India or elsewhere; (b) specifying a standard mark which shall be of such design and contain such particulars as may be prescribed to represent a particular Indian standard; and (c) conducting such inspection and taking such samples of any material or substance as may be necessary to see whether any article or process in relation to which the standard mark has been used conforms to the Indian Standard or whether the standard mark has been improperly used in relation to any article or process with or without a license. A person may apply to the bureau for grant of license or certificate of conformity, if the articles, goods, process, system or service conforms to an Indian Standard.

The Compulsory Registration Order issued by MNRE was published on August 30, 2017 and was scheduled to come into effect on the expiry of one year from the date of such publication. In terms of the Compulsory Registration Order, any manufacturer who, inter alia, manufactures, stores for sale, sells or distributes; (a) utility interconnected photovoltaic inverters, (b) power converters for use in PV power system, (c) PV modules (wafer and thin film) (d) thin film terrestrial PV modules; and (e) crystalline silicon terrestrial PV modules (collectively the “Goods”) would require registration from the Bureau of Indian Standards for use of the Standard Mark as specified in the Schedule of the Compulsory Registration Order. The Compulsory Registration Order seeks to prohibit the manufacture or storage for sale, import, or distribution of the Goods which do not conform to the standard specified under the Compulsory Registration Order. However, pursuant to the notifications of MNRE dated April 16, 2018 and October 12, 2018, considering the time taken for tests and the framing of the guidelines for such tests, manufacturers of SPV modules and inverters were permitted in the interim to continue operations by submitting a self-certification that their products conform to the relevant Indian standards or their IEC counterparts along with proof of submission of samples to laboratories with the expected date of completion of testing. With respect to SPV modules ((c), (d) and (e) above), the timeline for submission of such self-certification together with samples for a test lab recognized by BIS pending results was January 1, 2019. However, pursuant to a subsequent notification dated January 4, 2019 of the MNRE, manufacturers of inverters ((a) and (b) above) have been permitted to continue operations by only submitting self-certification by June 30, 2019 without submission of samples to test labs till the series guidelines for submission of samples was under preparation, provided that the manufacturers have valid IEC corresponding to the Indian Standard.

The Jawaharlal Nehru National Solar Mission

The Jawaharlal Nehru National Solar Mission (JNNSM), or the National Solar Mission, was an initiative of the Government of India and State Governments to promote solar power in India. Inaugurated in January 2010, the JNNSM had revised a target of 100 GW of solar PV in the year 2022.

Renewable Purchase Obligations

The Electricity Act promotes the development of renewable sources of energy by requiring the relevant electricity regulatory commission to ensure grid connectivity and the sale of electricity generated from renewable sources. In addition, it requires the relevant electricity regulatory commission to specify, for the purchase of electricity from renewable sources, a percentage of the total consumption of electricity within the area of a distribution licensee, which are known as renewable purchase obligations (“RPOs”). Pursuant to this mandate, most of the relevant electricity regulatory commission have specified solar and non-solar RPOs in their respective states. In terms of the RPO regulations, RPOs are required to be met by obligated entities (that is, distribution licensees, captive power plants and open access consumers) by purchasing renewable energy, either by entering into PPAs with renewable energy power producers or by purchasing renewable energy certificates.

Pursuant to the order dated June 14, 2018 (no. 23/03/2016-R&R) issued by the Ministry of Power, Government of India (the “MoP”), the MoP has notified the long-term growth trajectory of renewable purchase obligations for solar and non-solar, uniformly for all states/Union Territories for a period of three years i.e., Fiscal 2020 to 2022.

Further, pursuant to the order dated January 15, 2021 (no. 23/12/2016-R&R) issued issued by the Ministry of Power,

Government of India (the “MoP”), the MoP has notified Waiver of Inter-State Transmission charges and losses on transmission of electricity generated from solar and wind sources of energy.

Further, pursuant to the order dated June 21, 2021 (no. 23/12/2016-R&R Part-(1) [239444]) read with the order dated January 15, 2021 (no. 23/12/2016-R&R) issued by the Ministry of Power, Government of India (the “MoP”), the MoP has notified Waiver of Inter-State Transmission charges and losses on transmission of electricity generated from solar and wind sources of energy – **Amendment thereof.**

Renewable Energy Certificates Regulations (“REC Regulations”)

The Central Electricity Regulatory Commission notified the REC Regulations on January 29, 2020 which has been amended from time to time. REC Regulations was enacted to develop the market in electricity from non-conventional energy sources by issuance of transferable and saleable credit certificates (“**REC Mechanism**”). The REC Mechanism provides a market-based instrument which can be traded freely and provides means for fulfilment of RPOs by the distribution utilities/consumers. Under the REC Regulations, there are two categories of certificates, i.e., solar certificates issued to eligible entities for generation of electricity based on solar as renewable energy source and non-solar certificates issued to eligible entities for generation of electricity based on renewable energy sources other than solar. The REC Regulations determine the quantum of such certificates to be issued to the eligible entities and the method of dealing in the certificates.

The National Load Despatch Centre is the central agency which oversees the REC Mechanism, including, inter alia, registration of eligible entities, issuance of certificates, maintaining and settling accounts in respect of certificates, acting as repository of transactions in certificates and such related functions of the REC Mechanism as may be assigned by the CERC. There are certain conditions which are now imposed on electricity generating company, distribution licensee and captive generation plant to be eligible to apply for REC.

Ujjwal Discom Assurance Yojana (“UDAY”)

The Ministry of Power, GoI, notified on November 20, 2015. It provides for the financial turnaround and revival of power distribution companies (“**DISCOMs**”). The scheme is applicable only to State-owned DISCOMs including combined generation, transmission and distribution undertakings. The State Government, DISCOMs and the GoI are required to enter into agreements which shall stipulate responsibilities of the entities towards achieving the operational and financial milestones under the scheme. One of the features of this scheme is that the States shall take over 75% of the debt of the DISCOMs as of September 30, 2015 over a period of two years — 50% of the DISCOM debt in 2015-16 and 25% in 2016-17 as per the mechanism provided for in the scheme.

Pradhan Mantri Kisan Urja Suraksha evam Utthaan Mahabhivan Scheme 2019 (“PM-KUSUM”)

The PM-KUSUM scheme was implemented by the MNRE in 2019 with three components:

(i) For setting up of 10,000 MW of decentralized grid connected renewable energy power plants on barren land. Under this component, renewable energy-based powerplants (“**REPP**”) of capacity 500 KW to 2 MW will be set up by individual farmers / group of farmers / cooperatives / panchayats / farmer producer organisations (“**FPO**”) / water user associations (“**WUA**”) on barren land. The power generated will be purchased by state electricity distribution companies (“**DISCOMs**”) at pre-fixed tariff;

(ii) For installation of 1.75 million standalone solar agriculture pumps. Individual farmers will be supported to install standalone solar agriculture pumps of capacity up to 7.5 HP for replacement of existing diesel agriculture pumps / irrigation systems in off- grid area, where grid supply is not available; and

Integrated Energy Policy 2006

The Integrated Energy Policy, 2006, (“**Policy**”) is a report of an expert committee constituted by the Government of India, to explore alternative technologies and possible synergies that would increase energy system efficiency and meet

the requirement for energy services. The aims and objectives of this Policy include, amongst others, providing appropriate fiscal policies to take care of externalities, tax measures, transparent and targeted subsidies, promoting energy efficiency, providing incentive for renewable energy production by linking the incentive to not just the outlay but also the output. The Policy also provides for the respective power regulators to mandate feed-in-laws for renewable energy, as may be appropriate and as provided under the Electricity Act.

Net Metering Regulations

These regulations have been formulated by various states to promote the generation of electricity from renewable energy sources irrespective of the grid connected solar rooftop photovoltaic systems. These regulations regulate the supply of excess electricity from an eligible consumer allowing the consumer to export the excess quantum of electricity produced from his premises to the distribution licensee. Under these regulations, the eligible consumer can avail the benefit of the excess quantum supplied to be carried forward to the next billing cycle as credited units of electricity.

Grid Connected Solar Rooftop Programme

The aim of this initiative is to achieve a cumulative capacity of 40,000 MW from the rooftop solar projects by 2022. Phase-II of the Grid Connected Solar Rooftop Programme was approved by the Cabinet Committee on Economic Affairs (“CCEA”) and provides for central financial assistance for residential rooftop solar installations upto 40% for rooftop systems up to a capacity of 3 kW and 20% for those with a capacity of 3-10 kW. The Phase-II also focuses on increasing the incentives for DISCOMs based on achievement of certain installed capacity.

Integrated Power Development Scheme

The Integrated Power Development Scheme (“IPD Scheme”) was launched pursuant to the Office Memorandum of the Ministry of Power, GoI, dated December 3, 2014, by the Prime Minister of India on June 28, 2015 for urban areas, to ensure 24/7 power for all. The objective of the IPD Scheme is to (i) strengthen sub-transmission and distribution network in the urban areas; (ii) meter distribution transformers/feeders/consumers in urban areas; and (iii) enable IT of the distribution sector and to strengthen the distribution network as per CCEA approval dated June 21, 2013 for completion of targets laid down under the Restructured Accelerated Power Development and Reforms Programme (“RAPDRP”) for the 12th and 13th Five Year Plans by carrying forward the approved outlay for RAPDRP to IPD Scheme. It aims to help in the reduction of AT&C losses, the establishment of IT enabled energy accounting/auditing system, improvement in billed energy based on metered consumption and improvement in collection efficiency.

Foreign Investment Regulations

Special Economic Zones Act, 2005, rules and amendments thereof (“SEZ Act”)

The SEZ Act provides for the establishment, development and management of the special economic zones for the promotion of exports and for other connected matters. The SEZ Act provides various incentives in duties, tariffs and applicability of commercial laws, mainly to encourage investment and create employment. In a special economic zone, the economic laws are more liberal than the typical application of such economic laws in the country, to purport development, promote rapid economic growth by providing tax and business incentives. Such incentives are governed by the provisions of the SEZ Act.

As one of our existing manufacturing facilities is within a special economic zone, we are governed by the provisions of the SEZ Act and receive various incentives and subsidies within it.

Public Procurement Policy

Public Procurement Policy for Micro and Small Enterprises (“MSE”) was notified on November 9, 2018 under section 11 of Micro, Small and Medium Enterprises Development Act, 2006. Under the Policy, every Central Ministry /Department / PSUs need to set an annual target for 25% procurement from MSE Sector. A sub-target of 4% out of 25% target of annual procurement is required to be earmarked for procurement from MSEs

owned by SC/ST entrepreneurs. The Policy provides special provisions for Micro and Small Enterprise owned by women. Out of the total annual procurement from Micro and Small Enterprises, 3 per cent from within the 25 per cent target needs to be earmarked for procurement from Micro and Small Enterprises owned by women. Ministry /Department/CPSUs are required to prepare their annual procurement plan for uploading on their official website.

Central Public Sector Undertakings (“CPSU”)

The Ministry of New and Renewable Energy (“MNRE”) issued amendments for setting up 12 GW of solar projects with viability gap funding (“VGF”) by CPSUs for self-use or use by government entities. The total cost of the projects under this program is estimated to be ₹480 billion.

As per an earlier amendment, the Indian Renewable Energy Development Agency (“IREDA”) was made the implementing agency on behalf of the MNRE, including conducting the bidding through the VGF route. In 2021, IREDA floated a tender to set up 5 GW of grid-connected solar projects in India (Tranche III) under the CPSU program (Phase II). IREDA capped the tariff under this tender at ₹2.20/kWh. Following the announcement, Telecommunications Consultants India Limited issued an expression of interest to select partners for setting up solar projects under this program.

State solar policies

Our Company’s operations are also subject to the solar policies framed in the states in which the solar power projects are implemented, and we supply our products to such projects. Such policies typically provide a framework for the governance of the solar power industry and projects, procedures for undertaking of bids, terms of the renewable purchase obligations, connectivity to grid lines and the measures to be taken to promote the development of solar power in the state, including incentives to manufacturers such as grants of concessions on certain taxes, research and development initiatives.

SEBI/HO/CFD/DIL2/CIR/P/2019/76 June 28, 2019, circular no. SEBI/HO/CFD/DIL2/CIR/P/2019/85 dated July 26, 2019 and circular no. SEBI/HO/CFD/DCR2/CIR/P/2019/133 dated November 08, 2019 (collectively the "UPI Circulars") in relation to streamlining the process of public issue of equity shares and convertibles. Pursuant to the UPI Circulars, UPI will be introduced in a phased manner as a payment mechanism (in addition to mechanism of blocking funds in the account maintained with SCSBs under the ASBA) for applications by RIBs through intermediaries with the objective to reduce the time duration from public issue closure to listing from six working days to up to three working days. Considering the time required for making necessary changes to the systems and to ensure complete and smooth transition to the UPI Mechanism, the UPI Circular proposes to introduce and implement the UPI Mechanism in three phases in the following manner:

Phase I: This phase has become applicable from January 1, 2019 until March 31, 2019 or floating of five main board public issues, whichever is later. Subsequently, the timeline for implementation of Phase I was extended till June 30, 2019. Under this phase, a Retail Individual Applicant had the option to submit the Application Form with any of the intermediary and use his / her UPI ID for the purpose of blocking of funds. The time duration from public issue closure to listing continued to be six Working Days.

Phase II: This phase has become applicable from July 1, 2019 and was to initially continue for a period of three months or floating of five main board public issues, whichever is later. Subsequently, it was decided to extend the timeline for implementation of Phase II until March 31, 2020. Further, as per SEBI circular SEBI/HO/CFD/DIL2/CIR/P/2020/50 dated March 30, 2020, the current Phase II of Unified Payments Interface with Application Supported by Blocked Amount is continued till further notice. Under this phase, submission of the ASBA Form by RIIs through Designated Intermediaries (other than SCSBs) to SCSBs for blocking of funds will be discontinued and will be replaced by the UPI payment mechanism. However, the time duration from public issue closure to listing continues to be six Working Days during this phase.

Phase III: The commencement period of Phase III is yet to be notified. In this phase, the time duration from public issue closure to listing is proposed to be reduced to three Working Days.

All SCSBs offering facility of making application in public issues shall also provide facility to make application using the UPI Mechanism. The Issuers will be required to appoint one of the SCSBs as a sponsor bank to act as a conduit between

the Stock Exchanges and NPCI in order to facilitate collection of requests and / or payment instructions of the Retail Individual Applicants into the UPI mechanism.
